

Project: Alraqi Sports

Build a professional mobile-first sports streaming web application called "Alraqi Sports".

The application must be designed for Arabic users and optimized for Android mobile devices.

Main Goal

Create a modern sports platform that combines:

- Live matches
- Live TV channels
- Professional video player
- World Cup 2026 data
- Team information
- Group standings
- Stadium information

The application should look like a premium sports streaming app.

Technology Stack

Use:

- HTML5
- CSS3
- Vanilla JavaScript ES6+
- HLS.js
- PWA

Do NOT use:

- React
- Vue
- Angular
- jQuery

Everything must run statically.

Language Support

Primary Language:

Arabic RTL

Secondary Languages:

- English
- Persian

Create a complete translation system.

Structure:

languages/ |—— ar.json |—— en.json |—— fa.json

Arabic must be default.

Theme

Dark Modern UI

Colors:

Background: #0B1020 Surface: #141C2F Primary: #7C3AED Accent: #A855F7 Success: #10B981 Danger: #EF4444

Design Requirements:

- Modern glass effect
 - Smooth animations
 - Rounded corners
 - Premium mobile app appearance
 - Responsive layout
-

Bottom Navigation

Fixed bottom navigation:

1. Home

2. Matches
3. Channels
4. Standings
5. More

Use SVG icons.

Home Screen

Display:

- Featured Match Banner
 - Live Matches Carousel
 - Popular Channels
 - World Cup News Section
 - Quick Access Buttons
-

Matches Screen

Fetch data from:

<https://worldcup26.ir>

Required Endpoints:

`/get/games`

Display:

- Team Logos
- Team Names
- Match Time
- Match Date
- Match Status
- Stadium
- Tournament Stage

Status Types:

- Upcoming
- Live
- Finished

Live matches must display:

LIVE badge

Add:

Watch Match button

Teams Screen

Fetch:

/get/teams

Display:

- Team Flag
- Team Name
- FIFA Code
- Group

Create Team Details Page:

Display:

- Flag
 - Country
 - Group
 - Upcoming Matches
 - Finished Matches
-

Group Standings

Fetch:

/get/groups

Display:

- Position
- Team
- Played

- Wins
- Draws
- Losses
- Goals
- Points

Create professional standings table.

Stadiums Section

Fetch:

/get/stadiums

Display:

- Stadium Name
- Country
- City
- Capacity
- Image Placeholder

Create Stadium Details Page.

Channels Screen

Create IPTV Channel Management System.

Each channel contains:

- Name
- Logo
- Category
- Stream URL

Categories:

- Sports
- News
- Movies
- Kids
- Entertainment

Features:

- Search
 - Filters
 - Favorites
-

Video Player

Create professional player page.

Support:

- HLS (.m3u8)
- MP4

Use HLS.js.

Features:

- Play
- Pause
- Seek
- Volume
- Fullscreen
- Picture In Picture
- Quality Selection
- Reload Stream

Display:

- Current Match/Channel Name
 - Current Server
 - Stream Status
-

Multi Server System

Support:

Server 1 Server 2 Server 3 Server 4

Allow switching instantly.

Favorites

Users can save:

- Teams
- Matches
- Channels

Store locally using:

localStorage

Search System

Global Search:

Search across:

- Teams
 - Matches
 - Channels
 - Stadiums
-

Notifications

Prepare architecture for:

- Match Reminder
- Match Started
- Live Match Alerts

Use Service Worker notifications.

PWA

Create:

manifest.json service-worker.js

Features:

- Install App
 - Offline Mode
 - Cache Assets
 - Splash Screen
-

Performance

Requirements:

- Lazy Loading
- Code Splitting
- Optimized Images
- Fast Mobile Performance

Target:

Lighthouse Score > 90

Folder Structure

```
src/ | ├── index.html |── manifest.json |── service-worker.js |── css/ |── main.css |
    |── player.css |── responsive.css |── js/ |── app.js |── api.js |── player.js |
    |── matches.js |── teams.js |── standings.js |── channels.js |── search.js |──
i18n.js |── languages/ |── ar.json |── en.json |── fa.json |── assets/ |──
logos/ |── icons/ |── flags/ |── images/
```

API Handling

Create api.js.

Implement:

- Error Handling
- Retry Mechanism
- Loading States
- Fallback Data

If WorldCup2026 API fails:

Use local mock data automatically.

The UI must never break.

Code Quality

Requirements:

- Clean Architecture
- Reusable Components
- Modular JavaScript
- Accessibility Support
- Detailed Comments

Generate complete production-ready code.
